

Mobile water systems

Proven experience across the entire water cycle

Mobile solutions that secure your water supply

When water treatment systems fail, industrial operations quickly come under pressure. Whether due to unexpected disruptions, planned maintenance, or increasing regulatory requirements, a reliable water supply is essential for stable operations. Our mobile water solutions provide a flexible way to respond at short notice while maintaining cost efficiency. At the same time, through our collaboration, you benefit from an experienced partner with a forward-looking approach across the entire water cycle.

Challenges in industrial water management

In many industrial environments, water treatment is a critical part of production and at the same time a sensitive component. Even the failure of individual elements can have far-reaching consequences for overall operations. As a result, time pressure is often high: production downtime must be avoided or resolved quickly, while requirements for quality and efficiency continue to increase. Typical scenarios in industrial water management include:

- _ Unplanned events, such as technical failures or an ageing infrastructure
- _ Planned measures, including maintenance, retrofitting or modernisation
- _ Changing requirements, for example due to stricter regulatory standards in effluent management
- _ Capacity constraints, when existing systems reach their limits
- _ Economic considerations, where high capital expenditure is to be avoided and flexible operating models are preferred

The solution: mobile water systems

Mobile water treatment enables a fast and targeted response to exactly these types of situations. We provide individually configured systems that can be seamlessly integrated into your existing processes. Depending on your specific requirements, a range of technologies can be deployed, including ultrafiltration, reverse osmosis and other modular treatment stages, such as multimedia filtration and activated carbon filters. The modular design allows both capacity and treatment processes to be precisely tailored to your needs, regardless of the industry or application.

Our solutions are available at short notice as well as for medium- or long-term use and are provided on a rental basis. In addition, mobile systems offer the opportunity to test new requirements under real operating conditions and to further optimise your water management in a targeted way. We offer a range of solutions, from mobile plants for the production of process and ultrapure water to treatment systems for the post-polishing of effluent from wastewater treatment plants.

Let's discuss your needs

Your expert for mobile water systems:

Because reliability leaves no room for compromise: the advantages of mobile water systems

Reliable supply – even in critical situations

Mobile systems ensure that your water supply is restored quickly – even in the event of unexpected failures. Downtime is minimised, and production processes remain stable.

OPEX instead of CAPEX

With a rental model, you avoid high upfront investment costs. Instead, you benefit from clearly predictable operating expenses while maintaining financial flexibility.

Tailored solutions

Each set-up is customised to your specific requirements – both technically and operationally. Contract terms and capacities can be adapted with full flexibility.

Comprehensive expertise

With us, you benefit from extensive experience in industrial water management, combined with a broad technology portfolio. This enables efficient implementation, even for complex requirements.

Operational reliability

Our continuous support, remote monitoring and 24/7 service ensure reliable system operation – even in demanding situations.

Holistic approach

Beyond the mobile solution, we support you in assessing and further developing your entire water and wastewater infrastructure – from initial analysis through to long-term optimisation.

With our extensive expertise in holistic water management and as part of the REMONDIS Group, we offer more than a mobile solution – we support you with a reliable, end-to-end approach across the entire water cycle. Our integrated approach combines technical expertise, operational experience and a comprehensive service portfolio to deliver effective and practical solutions.

From request to operation – how it works

01

Assessment of your situation

You outline your current challenge – whether a short-term bottleneck or a long-term requirement.

02

Analysis and solution development

Together, we identify the most technically and economically viable solution.

03

Implementation planning

The appropriate system configuration is defined and aligned with your processes.

04

Delivery and integration

The system is delivered, connected and commissioned.

05

Operation and support

We ensure smooth and reliable operation throughout the deployment.

06

Strategic development

If required, we support you in developing long-term solutions.

WORKING FOR THE FUTURE

REMONDIS has branches and associated businesses in more than 30 countries and, with a workforce of over 45,000 employees, is one of the world's leading recycling, service and water companies. The group provides services to millions of people as well as to many thousands of companies. The highest levels of quality. Working for the future.
